SUMMARY

Full Stack Developer with 1.5+ years of experience at Rumango building banking software: a React Native mobile banking app and a Spring Boot loan origination backend with OCR-driven document processing. Skilled in React/React Native, TypeScript, React Query, Spring Boot, REST API integration and Oracle/MySQL. Also built MERN-stack projects end to end.

EXPERIENCE

Rumango Software and Consulting Services Bengaluru | Mar 2025 – Present

Backend Developer – Loan Origination System (LOS), ABC Banking Nov 2025 – Present

Java, Spring Boot, JPA/Hibernate, REST APIs, Oracle

- Developed and modified **Spring Boot REST APIs** for loan creation and related operations, with request handling and validation; tested APIs and debugged loan flows end to end with senior developers.
- Engineered a document-scanning service that validates uploads and routes **12+ document types** (national ID, passport, payslip, bank statement, credit bureau report, utility bill, civil certificates, vehicle quotation) to external **Python OCR** endpoints, normalizing responses for the UI and mapping upstream errors to clear messages.
- Designed insert-or-update persistence for extracted document data, including versioned payslip records, so repeat uploads update records instead of duplicating them; used **JPA/Hibernate** on **Oracle** and validated records with DBeaver.
- Automated **bank-statement analysis** (run asynchronously after each scan): calculated monthly and annual income and expenses, flagged risk indicators (gambling transactions, cheque bounces, unusually large transactions) and reconciled payslip net pay against salary credits month by month; processed credit bureau data to derive existing-loan details and estimated repayments.

React Native Developer – Mobile Banking App Mar 2025 – Oct 2025

React Native, TypeScript, Expo Router

- Delivered customer-facing banking features in **React Native** and TypeScript: list and search screens, multistep transaction flows, forms and file uploads.
- Implemented multistep flows with **Expo Router** and **Redux Toolkit**, adding OTP-verified confirmation before each transaction is submitted.
- Enforced business-rule validation (duplicate-request checks, zero-balance blocking, terms acceptance) so invalid requests never reach the API.
- Managed server state with **React Query** (conditional fetching, caching, retries, mutations), cutting redundant network calls on list and filter screens.
- Created forms with **React Hook Form** and reusable components; integrated token-authenticated REST APIs with multipart uploads.

PROJECTS

Bill Buddy | React, Node.js, Express, MySQL

- Led backend development of an online ordering and billing system for a college amenity center, replacing manually written orders, reducing queue times by **40%** and serving **1000+ users daily**.

DevTinder | React, Node.js, Express, MongoDB, Socket.IO

- Designed the connection-request lifecycle (send, accept, reject) and secure authentication for a developer-matching platform; added real-time chat between connected developers using **WebSockets (Socket.IO)**.

SKILLS

Languages:	Java, JavaScript, TypeScript, SQL
Frontend & Mobile:	React, React Native, Expo, Redux Toolkit, React Query, React Hook Form, HTML, Tailwind CSS
Backend:	Spring Boot, JPA/Hibernate, Node.js, Express.js, REST APIs, WebSockets, Socket.IO
Databases:	Oracle, MySQL, MongoDB
Tools:	Git/GitHub, Postman, DBeaver, Cursor
Core CS:	OOP, Operating Systems, Computer Networks

EDUCATION

Sri Eshwar College of Engineering 2021 – 2025

B.E. in Computer Science and Engineering | CGPA: 8.19

CERTIFICATIONS

The Joy of Computing using Python – NPTEL (Elite + Silver, 78%)
